PROFESSIONAL SUMMARY

Smart Contract Engineer with 3+ years shipping production-grade Solidity and Cairo contracts across Ethereum, zkSync, and StarkNet including work at Nethermind, one of Ethereum's core infrastructure firms. Expert in OpenZeppelin security frameworks, proxy/upgrade patterns, and end-to-end audit coordination, with a proven record eliminating re-entrancy, access control, and front-running vulnerabilities before mainnet. Now seeking to apply institutional-grade smart contract engineering to tokenisation infrastructure at regulated, high-stakes digital asset platforms.

TECHNICAL SKILLS

Blockchain Technologies: Ethereum, StarkNet, zkSync, EVM, Layer 2 scaling

Smart Contracts: Solidity, Cairo, Rust

Token Standard: ERC-20, ERC-721, ERC-1155; access control & permissioning patterns; partitioned/whitelisted token approaches

Proxy Contract: Diamond Contract

Security: Re-entrancy, front-running mitigation; internal security review; audit support; secure coding practices

Frameworks: Foundry, Hardhat, Protostar

Frontend: React, Next.js, Vite

Tools: Git, VS Code, GraphQL, Comet, Forta Bot

Languages: JavaScript, TypeScript, HTML, CSS

WORK EXPERIENCE

OpenPandora

Forward Deployed Engineer (Part-Time)

Feb 2026 - Present

- Deploy custom AI agent solutions and LLM-powered systems into enterprise client environments, owning the full post-sale implementation lifecycle from technical discovery through to production go-live.
- Design and integrate agentic AI architectures using Model Context Protocol (MCP) into enterprise infrastructure, ensuring secure and scalable embedding within existing data centre environments.
- Act as primary technical bridge between enterprise customers and product leadership, translating field insights from onsite deployments into product roadmap decisions.
- Communicate complex AI/ML system behaviour and deployment decisions to audiences ranging from technical architects to C-suite executives across high-stakes, multi-partner engagements.

Studiocrest (Self-Employed)

Lead Smartcontract Developer (Remote)

08/2024 - Present

- Architected and deployed production Solidity smart contracts for OrbSpace a decentralised identity and collaboration platform built on zkSync Layer 2 covering the full digital asset lifecycle from issuance through to controlled transfer and on-chain verification.
- Designed on-chain permissioning and identity management systems using OpenZeppelin access control and whitelisting patterns to govern multi-user workspace access in a compliance-first architecture.
- Applied proxy/upgrade patterns (UUPS and Diamond Contract) to support iterative contract development and post-deployment lifecycle management, enabling safe feature delivery without redeployment.
- Conducted end-to-end security reviews across the contract codebase, proactively identifying and mitigating re-entrancy, access control flaws, and front-running risks prior to mainnet deployment.
- Built TypeScript off-chain integration services and indexing pipelines to bridge on-chain state with internal application systems, ensuring secure and reliable data communication.
- Managed full deployment lifecycle including technical documentation, DevOps workflows, and staged beta release coordination.

Nethermind, London, E14 5EU, United Kingdom

Smartcontract Engineer (Nethermind Project)

05/2024 - 08/2024

- Implemented smart contracts in Solidity and Cairo for decentralised applications on Ethereum and StarkNet, ensuring secure and efficient on-chain execution.
- Integrated zkSync for verification contracts and implemented Eigenlayer AVS contracts directly applying proxy/upgrade and permissioning patterns at scale.
- Collaborated with cross-functional teams to define blockchain architectures and troubleshoot smart contract vulnerabilities, maintaining high security standards.
- Contributed to onchain strategy documentation including architecture design, deployment procedures, and security considerations.
- Supported internal security reviews, identifying potential attack vectors and applying mitigations aligned with institutional security requirements.

PRODIGAL AI PTY LTD, Surry Hills NSW 2010, Australia

Blockchain Developer (Remote)

06/2023 - 02/2024

- Developed and deployed secure, scalable ERC-20, ERC-721, and ERC-1155 token contracts on Ethereum, Polygon, and Arbitrum using Solidity, Foundry, and Hardhat, reducing deployment gas fees by 15%.
- Built comprehensive unit and integration test suites with greater than 95% code coverage, establishing quality gates for all contract releases.
- Applied secure coding best practices and cryptographic protocols; enforced security standards through peer code review and mentored three junior engineers, improving their code approval rate and delivery speed by 50%.
- Maintained off-chain integration layer using Web3.js with React frontends, delivering seamless DApp user experiences across multiple EVM-compatible chains.
- Partnered with product and compliance teams to translate security and protocol requirements into smart contract specifications, communicating trade-offs to both technical and non-technical stakeholders.

WEB3BRIDGE, Lagos, Nigeria

Blockchain Developer (Intern)

01/2023 - 02/2024

- Built and audited over 8 production-ready smart contracts using Foundry and Hardhat, achieving greater than 95% unit test coverage and comprehensive invariant test suites.
- Refactored legacy Solidity contracts to current standards, eliminating integer overflow risks and tightening access control patterns to improve security compliance.
- Coordinated pre-deployment internal security review process, identifying and resolving re-entrancy and unchecked external call vulnerabilities before mainnet launch.
- Documented development processes and collaborated cross-functionally to align technical smart contract solutions with business objectives.

SANCHY KREATIONS, Lagos, Nigeria

Frontend Developer (Full-Time)

06/2022 – 01/2023

- Delivered multiple production web applications using React, Redux, and React Query; integrated third-party APIs and RESTful backend services.

VOLUNTEERING EXPERIENCE

SKOOQS, LAGOS, NIGERIA

Mentor(Part-Time)

04/2023 - 02/2023

- conducted training sessions on the basics of web development for children
- Created engaging and interactive lesson plans to introduce HTML, CSS, and JavaScript concepts
- Assisted students in building their first websites and web applications
- Provided guidance and mentorship to foster creativity and problem-solving skills
- Monitored students' progress and provided constructive feedback for improvement
- Collaborated with other trainers to develop curriculum and course materials
- Organized and facilitated coding challenges and projects to enhance learning outcomes.

WEB3LADIES, LAGOS, NIGERIA

Mentor (Full-Time)

10/2023 - Present

- Dedicated to empowering aspiring female developers through comprehensive training in web development fundamentals. Provide guidance and support to facilitate skill acquisition and foster a more inclusive tech community

EDUCATION

York St John'S University, London Campus MSC International Project Management	01/2024 – 01/2025
Udemy Zero Knowledge Proofs In Rust CID: https://www.udemy.com/certificate/UC-3b677643-c83a-49ed-9caf-76d8dfb08c0e/	08/2024
Encode Club Solidity Bootcamp	08/2022 – 10/2022
Federal University Of Technology Akure B.Eng Metallurgical And Materials Engineering <i>Researchwork: Atmospheric Corrosion Mapping of the Federal University of Technology Akure.</i>	11/2015 – 10/2021
